ServiceMaster Clean implements technology

COHOES — ServiceMaster Clean has added the use of thermal-imaging technology to provide assistance in its disaster restoration work. Using a thermal imaging camera allows ServiceMaster Clean technicians an easy and quick way to detect moisture in buildings.

Used along with industry accepted moisture detection equipment, ServiceMaster Clean technicians are able to quickly establish and complete a drying plan for a building with moisture problems before it becomes a serious issue.

"It shows us exactly where the problem is, thus allowing a faster diagnosis. This is a very valuable instrument in many professions and having it in disaster restoration is a big plus for us and our customers and puts us ahead of our competitors," ServiceMaster Clean president Tom Harvey said.

ServiceMaster Clean of Upstate New York serves businesses and residents in Albany, Rensselaer, Schenectady, Saratoga, Warren, Washington and upper Greene counties.

It has been serving the Upstate New York area since 1985 with Disaster Restoration Services including fire, soot, odor, water damage and pack-outs.
